Remarks

- ◇ Given values are calculated averages in air-dry feed.
- ◇ Gross energy calculated according to Kamphues et al. 2009; GE=gross energy, DE= digestible energy
- ◇ Digestible energy calculated according to data from FEDIAF 2013.
- ◇ Nutrients are subjected to natural variation of the raw materials and their production process.

OUR FEED RECOMMENDATION

- ◇ The feed is suitable as a supplement to fresh feed and hay. Especially suitable for a high-protein diet with a high proportion of fresh grass and/or a high-protein roughage.
- ◇ The pellet should make up approx. 25-50 % of the ration.
- ◇ Approximate feed requirement per day in maintenance situations: rabbits: approx. 1.5-2.5% of body weight, guinea pigs: approx. 2-3% of body weight. Capybaras: ca. 0.5-0.7% of body weight. Maras: 1-1.5% of body weight.
- ◇ In breeding situations, pay attention to protein-rich additional components and offer the pellet at 3-4% of body weight or use article 3500.PS.S15.
- ◇ Free access to fresh water, roughage and nail material should be ensured at all times.

It is recommended to use the pellet in an enriched feeding management that maximizes the animals' feeding time
